(54) Title: SEMICONDUCTOR DEVICE AND CELLULAR PHONE USING THE SAME

(54) 発明の名称: 半導体装置及びそれを用いた携帯電話

| ST) Abstract: A semiconductor device (100) is provided with a processor part (110) having an internal CPU (113), an internal interface part (130), an external interface part (140) for connecting with an external CPU (201) through an interface unit (143), and selection circuits (121-126) and a connection control circuit (180). The internal interface part (130) is provided with a first bus (191) connected with the internal CPU (113), a second bus (192) connected with the external CPU (201) through the internal CPU (113), and selection circuits (131-136) which select each connection with the external CPU (201) through the internal CPU (113), and selection circuits (131-136) which select each connected with the external CPU (201) through the internal CPU (113), and selection circuits (131-136) which select each connection with the external CPU (201) through the internal CPU (113), and selection circuits (131-136) which select each connection with the external CPU (201) through the internal CPU (113), and selection circuits (131-136) which select each connection with the external CPU (201) through the connection control circuits (131-136) which select each connection with the external CPU (201) through the connection control circuits (131-136) which select each connection with the external CPU (201) through the connection control circuits (131-136) which select each connection control circuits (131-136) which
